How to Configure the Footer Custom Section

Footer · https://gloriathemes.com/docs/benson/footer/how-to-configure-the-footer-custom-section/

You can manage the Footer Custom Section settings from:

Appearance → Customize → Footer → Custom

Content Type

You can choose how the custom section content will be displayed:

- **Text Content** – Use the textarea editor to add custom text, HTML, or shortcodes.
- **Elementor Template** – Select a saved Elementor template to display in this section.

Depending on the selected type:

- If **Text Content** is selected, you can enter content directly using the editor.
- If **Elementor Template** is selected, you can choose a template from your saved Elementor templates.

What is an Elementor Template?

An Elementor Template is a reusable design created using the Elementor page builder. You can use it to build custom layouts such as banners, grids, promotional sections, or complex content blocks.

To create or manage templates, go to:

WP Admin → Templates → Saved Templates

Click **Add New**, design your layout with Elementor, and save it. Once saved, it will be available for selection in the Custom Section.

Footer Section Order

To control where the custom section appears in the footer, go to:

Appearance → Customize → Footer → Footer General

Inside the **Footer Sections** area, you can reorder different footer blocks such as:

- Newsletter
- Contact
- Icon Boxes
- Widgets
- Social
- Copyright
- Custom Section

You can drag and drop these sections to define their order in the footer layout.

Tip: Use the custom section to add promotional banners, custom HTML blocks, or fully designed Elementor layouts.
