How to Creating Google Maps API

Miscellaneous · https://gloriathemes.com/docs/bouffe/miscellaneous/how-to-creating-google-maps-api/

To avoid problems, activate these services: Street View Publish API, Maps Embed API, Maps JavaScript API, Maps SDK for Android, Street View Static API, Maps Static API, Maps SDK for iOS and Maps Elevation API.

Step 1 - Firstly, go to Google Maps Platform website.

Step 2 - Login to the site with your Google account.

Step 3 - After logging into the site, click on ‘Get Started' button at the site header.

Step 4 - You will redirect to Google Cloud Platform and you will access to the Google API overview page. Click on the project chooser dropdown at the right of the logo.

Step 5 - Choose a project from this step. If you don’t have any project, you click on 'New Project' button.

Step 6 - Enter the details of the new project in this step.

Step 7 - If the billing details page comes, configure billing settings in this page and next other page.

Step 8 - Click on ‘APIs’ link from the menu.

Step 9 - Click on ‘Maps JavaScript API’ item.

Step 10 - You created a API for JavaScript. Next, open the Credentials tab and click on ‘Credentials in the API Manager’ link.

Step 11 - Click on ‘Create Credentials > API Key’ link.

Step 12 - Copy the API key and enter the key to API key field of the theme settings panel.

Step 13 - Click on the restrict button. You will make API key settings.

Step 14 - Choose ‘HTTP referrers (web sites)’ option from ‘Application restrictions’ field.

Step 15 - Enter your website URLs from ‘Website restrictions’. Example: https://yoursite.com/*

Step 16 - Click on the save. Your API key is ready!
