How to Add Videos to Products

WooCommerce · https://gloriathemes.com/docs/digimart/woocommerce/how-to-add-videos-to-products/

You can add product videos to enhance your product presentation and provide more detailed visual information.

Add Multiple Videos

Edit or create a product and go to:

Product Data → Videos

Click **Add Video** to add videos.

You can add multiple videos using the repeater field.

Each video item includes:

- **Title** – Video title
- **Video URL** – Enter the video link

These videos will be displayed inside the product gallery (slider or list) along with product images.

Single Video (Overlay Mode)

In the same section, there is a separate field called **Video URL**.

This field supports **YouTube** and **Vimeo** links only.

When a video is added here:

- A small **play button** appears on the main product image
- Clicking it opens and plays the video

This method does not add the video into the gallery slider, but instead overlays it on the product image.

Tip: Use the gallery videos for multiple media content, and the single video option for a cleaner, focused video presentation.
