# How to Add Custom Fonts Using CSS3 Font Face

Customization · https://gloriathemes.com/docs/noxe/customization/how-to-add-custom-fonts-using-css3-font-face/

**Step 1 -** Navigate to the Media > Add New from the WordPress dashboard.

**Step 2 -** Upload font file to your site. For example: font-name.woff

**Step 3 -** Copy the file url after the upload is complete.

**Step 4 -** Navigate to the Apperance > Customize.

**Step 5 -** Open the 'Additional CSS' pane.

**Step 6 -** Add the CSS code below. With this code, we will add the font to the system.

```
@font-face {
font-family: FontName;
src: url(http://www.siteurl.com/wp-content/upload/2022/FontName-Regular.ttf);
font-weight: normal;
}
```

**font-family:** Enter font name. Example: Lucia.
**src:** Add the file url you copied in parentheses.

**Step 7 -** Add the CSS code below. With this code, you can select the classes, ids or elements you want to define the font.

```
.class-name, .header, .footer {
font-family: "FontName", Arial, sans-serif;
}
```
